Setting language to en-US because LANG=en_US.UTF-8

 Hello! hex-tool is a command line tool developed by HexMove.
 It is mainly used to facilitate the installation of SDKs and other tools.
 The tool supports skipping compilation tests, directly specifying the installa
ion of a certain SDK, etc.
 (especially convenient for automatic environments such as docker).
 If you are interested, please refer to the comments in the bash script.

 DISCLAIMER: Docs to modify the script are provided as is.
 You can modify it as you like, but there is no guarantee that it will work as
xpected.

Downloading SDK meta information from the Internet...

Choose operation
